| wind of Study   | Mechatronics<br>Semester 1<br>KOSEN Textbook Series ~  | Student Calegory<br>Classes or Weak   | Year 1<br>3<br>and Waves, H. Lishis et al. March   |  |
| tecutreci Materiale<br>natruolor  | KOSEN Festbook Series Ph<br>Publishing Co., Ltd. ISBN97<br>Srawut Sesom  | veios volume 1, Mechanice<br>8-4-627-15511-4<br>Natsuda Klongvessa  | and Waves. H. Ushio et al., Morikita   | -  |
| Course Objective<br>There are various types of engineering p<br>tructents with a basic knowledge of phy   | roblems that require a good i<br>rics in mechanics. This includ  | nowledge and application  | of physics. This course provides   | 1  |
| scoleration. Newton's laws of motion. I<br>The exercises and homework are design  | oros and the equation of mo<br>ed to help the students devel   | tion of an object. The court<br>op knowledge, problem so  | ving skills, and understanding.  |  |
| Velusion Public<br>Isse the mathematical knowledge<br>research to oble chroics reduition. (e.<br>antificant Baures, vectors, trigonometric<br>unctions, effective ineffective solutions | Ideal Level of Achievement<br>Very Good<br>Submit assignments by the<br>deadline, and able to solve<br>not only basic problems<br>on inderm and/or final<br>exams correctly.   | Standard Level of<br>Achievement (Good<br>Have the mathematical<br>knowledge necessary to<br>solve physics solution,<br>i.e. significant figures,<br>vectors, trigonometric<br>functions. | Unacceptable Level of<br>Achievement (Fall)<br>Do not have the methematical<br>knowledge necessary to solve<br>physics solution. (e., significant<br>gazes, vectors, trigonometric<br>functions, effective/ineffective<br>solutions  |  |
| tave mathematical and graphical<br>expression skills  | Submit assignments by the<br>deadline, and able to solve<br>not only basic problems<br>but also applied problems<br>on middrem and/or final  | effective ineffective<br>solutions<br>Have mathematical and<br>graphical expression<br>skills   | Do not have mathematical and<br>graphical expression skills  |  |
| an describe and derive the motion of<br>in object in mathematical formulas  | exams correctly.<br>Submit assignments by the<br>descline, and able to solve<br>not only basic problems<br>but also applied problems<br>on midterm and/or final<br>exams correctly.  | Can describe and derive<br>the motion of an object<br>in mathematical formulae  | Can not describe and derive the<br>motion of an object in<br>mathematical formulas   |  |
| an describe and derive the failing<br>notion of an object in mathematical<br>ormulas  | Submit assignments by the<br>deadline, and able to solve<br>not only basic problems<br>but also apolled problems<br>on midterm and/or final<br>exams correctly.  | Can describe and derive<br>the failing motion of an<br>object in mathematical<br>formulas   | Can not describe and derive the<br>failing motion of an object in<br>mathematical formulas   |  |
| lescribe various forces acting on an<br>baset in mathematical formulas  | Submit assignments by the<br>deadine, and able to solve<br>not only basic problems<br>but also applied problems<br>on micherm and/or final<br>exams correctly.   | Describe various forces<br>acting on an object in<br>mathematical formulas  | Can not describe various forces<br>acting on an object in<br>mathematical formulas   |  |
| Ind describe the motion of an object<br>swe initial conditions using Newton's<br>swe of motion  | deadline, and able to solve<br>not only basic problems<br>but also applied problems<br>on midderm and/or final<br>exams correctly.<br>Submit assignments by the  | laws of motion and<br>describe the motion of<br>an object given initial<br>conditions using<br>Newton's laws of motion<br>Explain static and  | motion. Can not describe the<br>motion of an object given initial<br>conditions using Newton's laws<br>of motion<br>Can not explain static and   |  |
| Able to derive mechanical energy in<br>erious situations and derive the   | personne, and able to solve<br>not only basic problems<br>but also applied problems<br>on midterm and/or final<br>exams correctly.<br>Submit assignments by the<br>deadline, and able to solve   | And able to use both in<br>different situations<br>Able to derive<br>mechanical energy in .   | consmic incoores fordos and can<br>not use both in different<br>situations<br>Can not derive mechanical energy<br>in various situations and can not  |  |
| notion of an object using the law of<br>conservation of mechanical energy   | not only basic problems<br>but also applied problems<br>on midterm and/or final<br>exams correctly.<br>Relationship with Lee   | verious situations and<br>derive the motion of an<br>object using the law of<br>conservation of<br>mechanical energy<br>ming Outcomes   | derive the motion of an object<br>using the law of conservation of<br>mechanical energy.   |  |
| 2(1) Wide knowledge on Science en<br>Nesse change<br>Nesse change   | d Engineering and precision  | ability to apply them to  | solve problems in the society.   |  |
| Feaching Method   |  |   |  | ,<br>]   |
| Outline:<br>Class Format:   | Students will study basic concepts and principles of me<br>execution to develop an expression of the Underner<br>works, and the intervention of the Underner<br>works, scalar, intervention, include an endowed<br>works of motion, friction, kinetic everys, potent<br>Lecture and exercise |   | schantos in physics, Studentis are<br>al laws and principles and their<br>re covered significant figures,<br>ective solutions, kinematics, forces,<br>tal energy, and conservation law.  |  |
| Course Plan   | nameseras will be posted of<br>photo copies or files of all s  | n u e ucogre destroom. T<br>ubmitted material to ensure   | ng outdent is requested to keep<br>further study by oneself,   |  |
| fist week   | Guidanos: Knowledge of ma<br>In order to study physics   | thematics to be acquired  | Have the mathematical<br>knowledge necessary to solve<br>physics solution (a, significant<br>figures, scalar and vectors,<br>trigonometric functions used in<br>physics. SI units,   |  |
| 2nd week  | Motions of an object: position of an object position in one and two  | an, velocity and<br>climentional systems  | Explain the concepts of velocity<br>and acceleration: Calculate<br>average velocity, evenant<br>acceleration: the relative endoty<br>content of the relative endoty<br>resultant velocity in lever and<br>pearam motions. Calculate the<br>specific on and velocity of object in<br>relation to the using the<br>constant acceleration, with<br>constant acceleration, with<br>understant and interpret the<br>motion of point meases on a<br>party surface as a change of | I-A 1  |
| 3rd week  | Motion of a failing object   |   | Calculate the position and<br>velocity of an object at a given<br>time in free fallwertical projectile<br>motion, horizontal and oblique<br>projectile motions.  | 1-A 1<br>1-A 1<br>1-B 1<br>1-B 1<br>1-B 1<br>1-B 1             |
| 40h veesk   | Various brass of forces: gravitational force, drag force,<br>tension and frictional forces,  |   | Show forces acting on an object<br>using diagrams, free body<br>diagrams, Galaxie and interpret<br>the composition and<br>decomposition of forces. Solve<br>problems relating to exultarium of<br>proge acting on body masses.<br>Earos, tension and finitianal<br>forces, tension and finitianal<br>forces, tension and strational<br>forces, tension and strational<br>solves. The solution forces<br>using Hooke's law.   | I-A 1 1<br>I-A 1 1<br>I-A 1 1<br>I-A 1 1<br>I-A 1 1<br>I-A 1 1 |
| 5th week  | Newton's laws of motion  |   | Esolutin three Newton's laws of<br>motion, i.e. the law of inertia, the<br>law of motion and the law of<br>action and reaction forces. Can<br>show example applications of<br>these laws. Perform calculations<br>using Newton's equation of<br>motion.  | I-A 1 1<br>I-A 1 1<br>I-A 1 1<br>I-A 1 1                       |
| Oth week  | Frictional forces: static frictional force and kinetic<br>frictional force   |   | Explain the equilibrium of forces<br>when static frictional forces are<br>present. Perform calculations<br>relating to maximum frictional<br>forces and kinetic frictional forces.   | I-A 1 1<br>I-A 1 2<br>I-A 1 2                                  |
| 7th week  | Perform calculations using Newton's equation of<br>motion  |   | Mock examination   |  |
| 8th week  | Wrap-up of 1st half of semester (Review)   |   | Review and summarize learning  |  |
| 9th week  | Midterm examination  |   | For week 1-8   |  |
| 10th week   | Petum midterm exem papers and give feedback  |   | Return midterm exam papers and give feedback   | LA 1 2   |
| 11th week   | Work and power   | Work and power  |  | I-A 1 2  |
| 12th week   | Potential energy   | Potential energy  |  | 1-A 1 2<br>1-A 1 2   |
| 14th week   | Mechanical energy and law of mechanical energy<br>conservation   |   | elastic potential energy<br>Use the law of conservation of<br>michanical energy for the<br>calculation of various invision   | I-A 1 2  |
| 15th week   | Work by conservative force and non-conservative force  |   | cuantities<br>Change in mechanical energy with<br>non-conservative for-we  |  |
| 16th week   | Physics experiments  |   | Experiments of the field related to mechanics  |  |
| 17kk counts   | Perform calculations using law of mechanical energy<br>conservation,   |   | Mock examination   |  |
| TTO TWEEK   | Wrap-up of 2nd half of semester (Review)   |   | Review and summarize learning  |  |
| 18th week   | Wrap-up of 2nd half of ser   | ester mevew   |  |  |
| 19th week   | Wrap-up of 2nd half of ser   | ester newew   | For week 11-18   |  |
| 18th week   | Weamup of 2nd half of serr<br>Final examination<br>Return exam papers and fer  | xback   | For week 11-18<br>Return exam papers and feedback  |  |
