

Science 2 (Physics)

Basic Course Information	19105620	Subject Category	Chemistry/Ed
Class Format	Lecture	Credit Type and Number of Credits	1.5
Department	Mechatronics	Student Category	Year 1
Period of Study	Semester 2	Classes per Week	1
Required Materials	KOSSEN Textbook Series Physics volume 1: Mechanics and Waves H. Löhn et al., Markta Publishing Co., Ltd. ISBN978-4-627-15011-4		
Instructor	Rajaraman Rajaratham		

Course Objective
This course introduces basic concepts of science such as IP (momentum and collision), uniform circular motion, simple harmonic motion, angular motion, universal gravitation, static equilibrium, rotation of rigid body.

	Ideal Level of Achievement (Very Good)	Standard Level of Achievement (Good)	Unacceptable Level of Achievement (Fair)
Understanding concepts of physics	Show very good knowledge and understanding of concepts in physics. Good connections among these concepts and mathematical procedures to correctly solve problems or answer questions.	Show good knowledge and understanding of typical physics concepts. Good connections among these concepts and mathematical procedures to solve problems, but occasionally may make minor errors.	Lacks the appropriate knowledge and understanding of concepts in physics. Weak connections among these concepts.
Mathematical and graphical representation	Show good understanding and graphs are logical with sufficient details to describe the content.	Show understanding and graphs are reasonable with the content, but not with details.	Describe insufficiently in the content. Equations are limited or inaccurate. Graphs are incomplete or absent of information.
Problem Solving	Provide a clear and logical progression from general concepts/equations to solve specific problems. All final numerical answers are correct with appropriate units and calculations.	Provide a logical progression from general concepts/equations to solve specific problems with minor mistakes in calculation, algebraic or units.	Provide an unclear logical progression or solution which is very difficult to follow. Major mathematical and/or other mathematical mistakes in solution, algebraic or units.

Relationship with Learning Outcomes

8(1) Wide knowledge on Science and Engineering and practical ability to apply them to solve problems in the society.

Please change

Teaching Method

Outline:

Students will study basic concepts and principles of mechanics in physics. Students are expected to develop an appreciation of the fundamental laws and principles and their applications to solve typical questions.

Class Format: Lectures, exercise and experiment

Please Note : All materials will be posted on the Moodle classroom. The student is requested to keep photo copies or files of all submitted materials to ensure further study to oneself. Assessment is requested to submit in google classroom within a week after it is assigned. If not, there will be score deduction for late submission. Full score +100 points submission within a week, 80 points submission after one week and 65 points submission after Physics final exam date and 50 points 2 weeks after the final exam date!

Course Plan	Semester 2	Contents and Method of Course		Related MCO
		Contents and Method of Course	Goals	
	1st week	Guidance Introduction, Impulse and momentum	Calculate momentum based on mass and velocity of object.	I.A. 1 - 25
	2nd week	Law of conservation of momentum, Coefficient of restitution and collision and rebound	Use the momentum conservation law for the calculation of various physical quantities. Calculate coefficient of restitution and collision and rebound.	I.A. 1 - 25
	3rd week	Uniform circular motion	Perform calculations relating to velocity, angular velocity, acceleration and centripetal force of objects in uniform circular motion.	I.A. 1 - 32
	4th week	Simple harmonic motion	Explain the relationships between displacement, velocity, acceleration, and force in relation to the simple harmonic motion.	I.A. 1 - 32
	5th week	Experiment: Simple harmonic motion	Do experiment related to simple harmonic motion.	I.A. 1 - 32 I.B. 1 - 3
	6th week	Universal gravity and planetary motion 1	Calculate the gravity acting between objects using the law of universal gravitation.	I.A. 1 - 33 I.B. 1 - 4 I.B. 1 - 5 I.A. 1 - 33
	7th week	Universal gravity and planetary motion 2	Perform calculations related to planetary motion.	I.A. 1 - 34
	8th week	Summary of Week 1 - 7	Preparation for midterm examination 1st amp	
	9th week	Midterm Examination	For week 1-8	I.A. 1 - 35
	10th week	Return Midterm Exam and feedback, Moment of the force	Understanding return midterm exam and feedback, Calculate the moment of forces.	I.A. 1 - 36
	11th week	Static equilibrium of rigid body	Perform calculations relating to the equilibrium of forces of rigid bodies.	I.A. 1 - 39
	12th week	Center of gravity, center of mass and object stability	Perform calculations relating to the center of gravity. Consider rigid body (line and unstable balancing and torques	I.A. 1 - 39
	13th week	Rotational equation of motion	Perform calculations relating to rotational motion of rigid bodies about a fixed axis using the rotational equation of motion.	I.A. 1 - 41
	14th week	Moment of inertia and angular momentum	Perform calculation of the moment of inertia for simple shapes, such as a uniform rods and angular momentum.	I.A. 1 - 42 I.A. 1 - 40
	15th week	Experiment: Rotational motion	Do experiment related to rotational motion.	I.A. 1 - 41 I.B. 1 - 1 I.B. 1 - 3 I.B. 1 - 4 I.A. 1 - 47
	16th week	Conservation of angular momentum and rotational energy	Explain the principle of conservation of angular momentum through specific examples.	I.A. 1 - 47
	17th week	Summary of Week 10-16	Preparation for midterm examination 2nd amp	
	18th week	Final Examination	For week 10-17
